## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03-07-05 has been entered. Claims 98-103 have been added; thus claims 63-103 are pending.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 63-103 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In the independent claims 63, 82, 85, 87, 89, 91, 96, 98, 99, 100, 101, 102, and 103, the specification lacks support for the subject matter "a memory array comprising a plurality of groups of data cells and address cells, said cells in each of said groups of data cells and address cells respectively storing data and addresses." The

specification on pages 16 and 17 only depicts "a typical sector 401 organized into a data portion 403 and a spare (or shadow) portion 405" and "the spare portion 405 is further organized into an alternative defects data area 407, a defect map area 409, a header area 411 and an ECC and others area 413." Therefore, the specification fails to describe groups of address cells for storing address in a memory array.

### ***Response to Arguments***

4. Applicant's arguments filed 03-07-05 have been fully considered but they are not persuasive.

In the Remarks on page 11, the Applicants explained that the newly added claims 98-103 do not use "address cells" language; but the claims 98-103 cite "second cells" for "storing addresses". This "second cells" language with a functional means for storing addresses suffer the same deficiencies as the rejected language "address cells", because these limitations lack support from the specification as originally filed.

At the bottom of page 11 and on page 12, the Applicants again argued that the present application provides support for "address cells ... storing ... addresses". On the contrary, the specification on page 17, lines 6-8, only describes the addresses of the defective cell and the backup cell stored as defect pointers in the defect map 409. The defect pointers are not address cells for storing addresses as claimed in claims 63, 82, 85, 87, 89, 91, 96, 98, 99, 100, 101, 102, and 103. The specification does not mention about address cells and storing addresses as claimed, but only about the addresses ...stored as defect pointers.

In conclusion, the claims 63, 82, 85, 87, 89, 91, 96, 98, 99, 100, 101, 102, and 103 lack support from the specification and are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement.
